

## Description

Steel Knight 1513 is a platform game that will allow us to travel across 12 levels through various Indian territories in North America.

## History

The game's history dates back to 1513, when an expedition led by Juan Ponce de León first broke into the territories of Florida.

A soldier of the expedition is informed by the natives about a great treasure hidden deep in the mountains of North America, that's when this soldier decides to desert the expedition to go solo in search of the treasure to become the richest man in America.

## About Tridente Studio

Tridente Studio is formed by a team of professionals with more than 20 years of experience in the field of 3D animation. After several years of working in creating 3D models and animations for videogames for other companies we decided to make the leap to create our own stories.

Steel Knight is our first creation and we hope it will be the beginning of a long series of video games currently in developing phase.
